10-4 Smart Factory

(Packaging Warehouse) Management System (WMS)

The automated warehousing control system manages material in/out in real time. The company has PMMS-based management of raw materials and resources and the sophisticated general control of bar code system to trace and control goods from arrival, move in/out, transfer, production, to shipment in real time.

Raw material Weighing Management System (RWMS)

The company has an error-less, Almost 100% accurate raw material Weighing system using an ERP-linked Electronic scale and bar code system and achieves quality assurance and trust from customers.

SMART FACTORY

Manufacturing Tracking System (MTS)

A manufacturing history tracing system is utilized in lot-specific manufacturing History (raw material input, temperature, RPM) data management and equal management by each lot.

Packaging

reBom has a clean work environment with automation, modernization and performance evaluation along with CGMP software and hardware to produce top-quality products. The cutting-edge system of ERB-connected POP is utilized in real-time production monitoring for the company to maintain maximum productivity and best performance in meeting delivery deadlines.

11 Design Center

The reBom Design Center consists of experts with knowhow based on years of design practices and experiences.

The division presents designs based on the understanding of customers' intention and purpose in order to guide each client company's brand value to a success. The Design Center division assures its utmost efforts to provide creative designs from a broad perspective and Communicate with customers.

reBom assures our best efforts for continued growth as one of the major cosmetics R&D companies and export-specialized companies in the Republic of Korea.

Thank You
